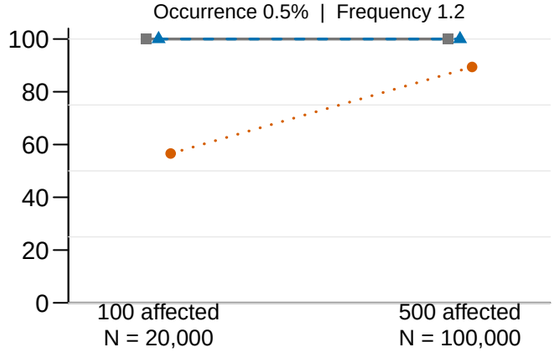
Figure 2. Availability of frequency estimates

Frequency = average events among people with at least one event

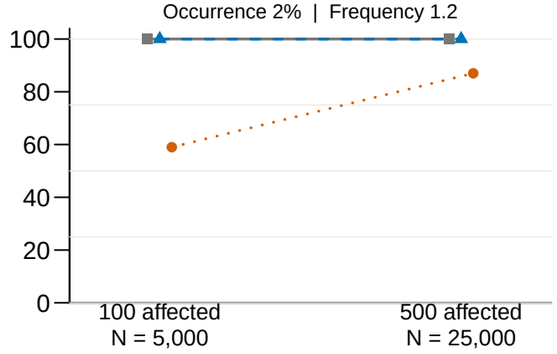
Poisson Negative binomial (NB2) Hurdle NB2

Acceptable fits (%)

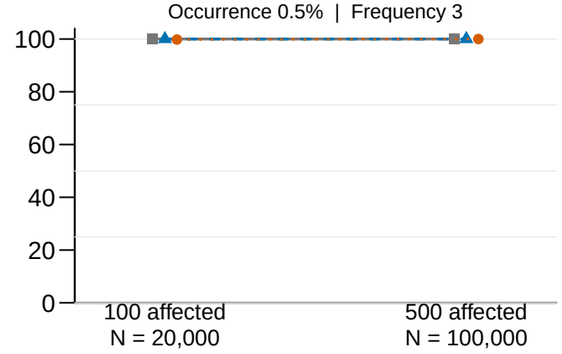
No stratum interaction effects — Occurrence 0.5% | Frequency 1.2



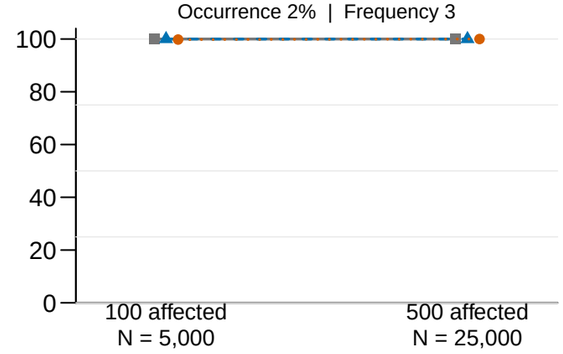
No stratum interaction effects — Occurrence 2% | Frequency 1.2



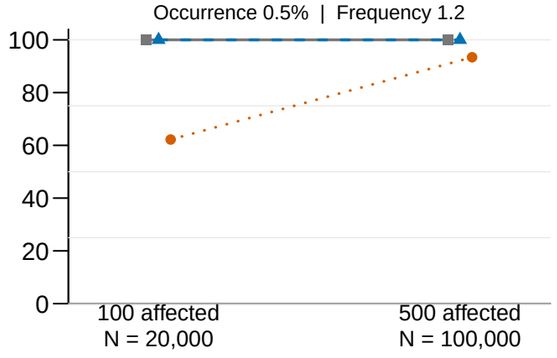
No stratum interaction effects — Occurrence 0.5% | Frequency 3



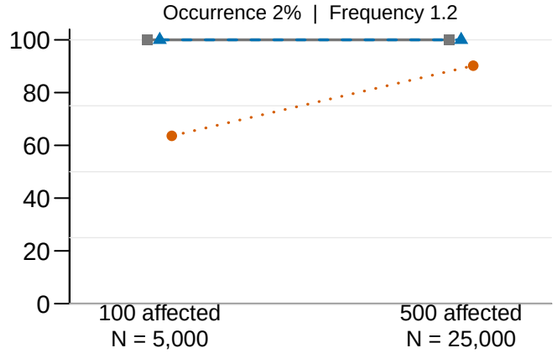
No stratum interaction effects — Occurrence 2% | Frequency 3



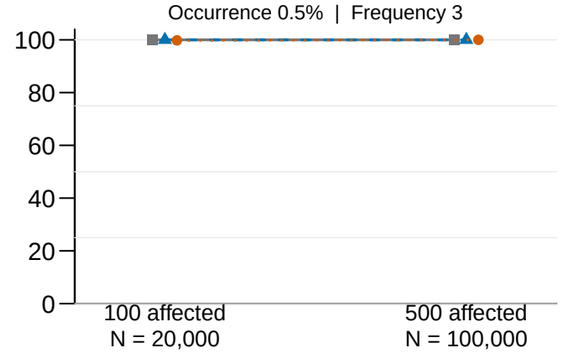
Interaction effects: same direction — Occurrence 0.5% | Frequency 1.2



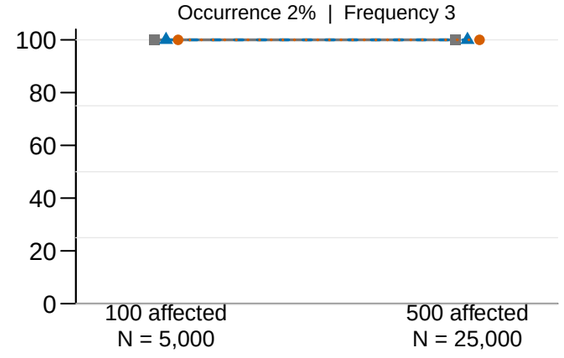
Interaction effects: same direction — Occurrence 2% | Frequency 1.2



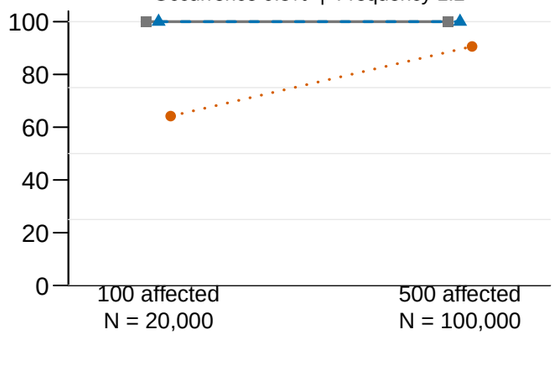
Interaction effects: same direction — Occurrence 0.5% | Frequency 3



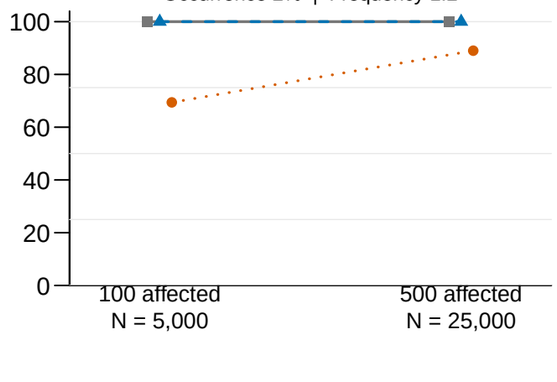
Interaction effects: same direction — Occurrence 2% | Frequency 3



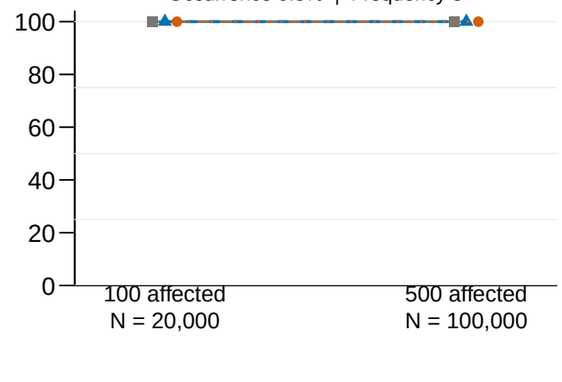
Interaction effects: opposite directions — Occurrence 0.5% | Frequency 1.2



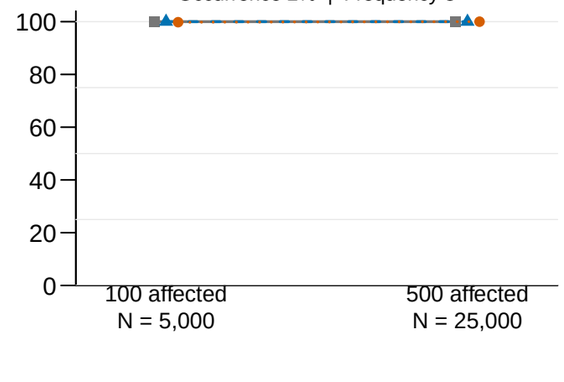
Interaction effects: opposite directions — Occurrence 2% | Frequency 1.2



Interaction effects: opposite directions — Occurrence 0.5% | Frequency 3



Interaction effects: opposite directions — Occurrence 2% | Frequency 3



Expected number affected; N is the total sample size

All 500 datasets per setting form the denominator. Passing checks does not establish accuracy.

Primary regularised additive models; 24 main settings. Lines connect two tested information levels.
